Summary

Software Engineer with over 9 years of experience designing and implementing scalable solutions for enterprise software ecosystems. Proficient across backend services, frontend interfaces and database layers. Experienced in building configuration driven solutions, cross platform integrations, and production grade systems in cloud environments such as AWS. I have implemented and improved CI/CD pipelines, optimized database performance, and delivered robust solutions in collaborative environments. I strategically leverage modern development tools, including AI-assisted coding, to accelerate delivery while maintaining rigorous quality standards.

I follow development best practices with a strong foundation in software design patterns, microservices architecture, deployment coordination, unit testing, and agile development. Experienced in conducting code reviews, working with cross functional teams and codebases, and ensuring architectural consistency across projects to deliver high quality solutions.

Technical Skills

Backend Development: Python, TypeScript, Java-based development (Apex/Java), Spring Boot, RESTful API design, microservices architecture, MVC patterns, object-oriented programming, server-side logic

Frontend Development: React, Angular, Vue, Flutter, TypeScript, JavaScript, Next.js, TailwindCSS, responsive web components, modern UI/UX patterns

Database & Query Languages: SQL (MySQL, PostgreSQL), query optimization, database schema design, complex joins and aggregations, data modeling for production systems

Cloud & Devops: AWS (Lambda), Google Cloud Platform (Pub/Sub), CI/CD pipelines, Jenkins, GitHub Actions, Docker, Kubernetes, version control (Git)

Testing & Quality: Jest, Playwright, unit testing frameworks, test driven development, developer code review practices

Development Tools: VSCode, AI assisted development with Cursor, Claude Code, Bash, MCP (GitHub, Figma), Jira, Storybook

Professional Experience

Guild, Denver CO — *Salesforce Developer (Remote)* | Strengthened skills in CI/CD automation, managed package customization, and scalable data model configurations with remote teams.

September 2022 - May 2024

- Updated CI/CD packaging model through Github for daily deployments
- Collaborated with business staff and cross functional teams to define project requirements
- Modified ETL model between AWS and Salesforce
- Wrote jest tests for frontend web component testing
- Created omni channel configurations to route work across coaching team

Virta Health, Denver CO — *Software Engineer (Remote)* | Gained expertise in cross platform integrations, performance optimization, and modern frontend architecture in a healthcare technology environment.

March 2021 - April 2022

- Optimized Google Cloud Pub/Sub subscription model to Salesforce for data efficiency
- Wrote frontend code in our internal patient intake app built on React and TypeScript
- Used modern development stack and containerization tools including Docker, Kubernetes, Tilt and Storybook

- Updated web component data and displays for our patient admin team

Slalom Consulting, Denver CO — *CRM Consultant* | Built consulting expertise and technical versatility in multi-org environments, gaining exposure to different enterprise coding practices and secure deployment processes.

June 2019 - September 2020

- Directed Salesforce projects through execution of consulting approach and on site visits
- Collaborated with engineers external to Slalom to review and deliver solutions.
- Used different client DevOps pipelines and various CI/CD solutions
- Developed POC work during project discovery phases to support client buy in

Zayo Group, Boulder CO — *Jr. Application Developer* | Developed a strong foundation in Salesforce customization, security, and testing practices within a large enterprise environment.

January 2015 - September 2018

- Managed user roles and permissions for different custom objects and record types
- Updated front end purchasing tool built on Angular
- Created custom components written in Java framework
- Implemented unit tests and learned best practices for corporate codebases

Education

Colorado School of Mines, Golden CO — *Bachelor of Science in Math and Computer Science*

Graduated December 2014

Areas of Study: Algorithms, Database Management, Data Structures, Elements of Computing Systems, Discrete Mathematics, Operating Systems, User Interfaces, Linear Algebra
